Overview

This report summarises **federal public investment** recorded in the yearly cuadros “*Inversión de las dependencias, organismos y empresas del sector público, por entidades federativas*” for **1959–1963**. Each observation is one institution’s investment in one state in one year. All figures are reported in **real millones de pesos, constant 1960 prices**, deflated with the World Bank consumer price index (see below).

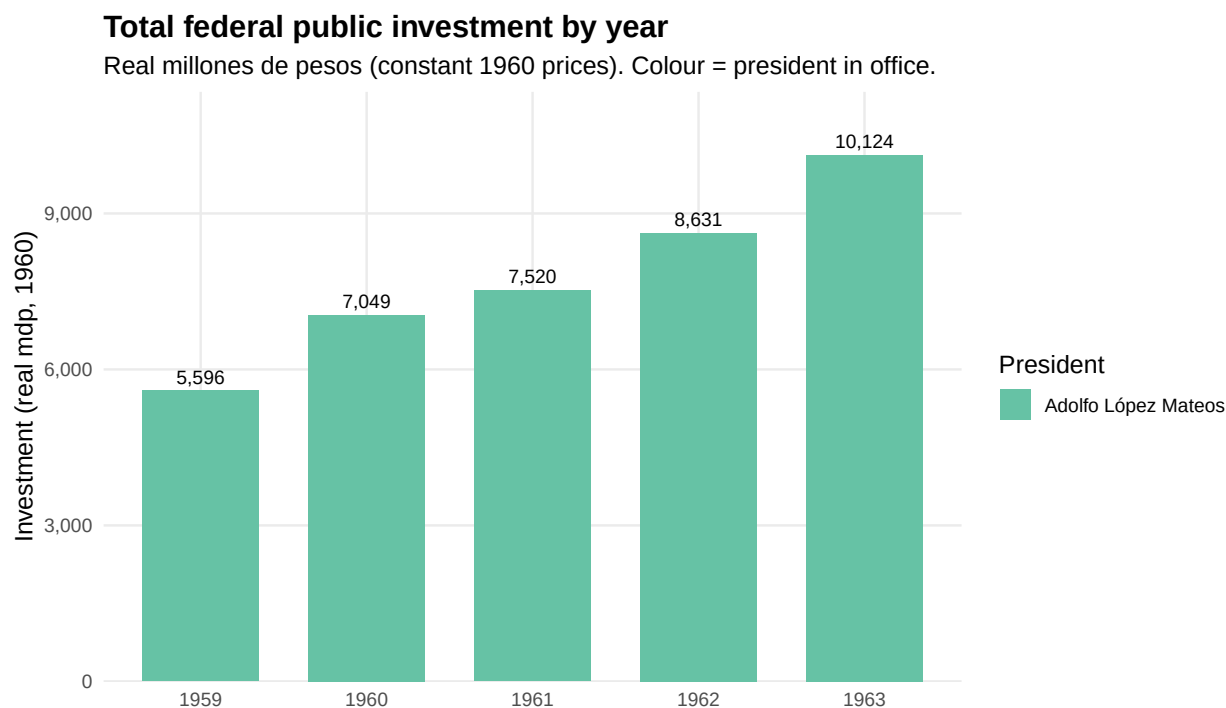

Deflation. Nominal pesos are converted to constant 1960 pesos using the Mexican CPI (World Bank WDI), rebased so 1960 = 100. Because the series begins in 1960, fiscal year 1959 is assigned the 1960 price level. Inflation was low in this window (about 3.4% cumulative 1960-1963), so the real adjustment is modest but makes the yearly totals directly comparable and consistent with the eventual 1925–2000 panel.

Presidency note. All five fiscal years fall within a single sexenio — **Adolfo López Mateos (PRI, Dec 1958 – Nov 1964)**. “By presidency” cuts below therefore describe López Mateos’ term; the code carries a general year-to-president map so the same tables extend automatically if earlier cuadros (back to 1925) are added.

Table 1: Coverage of the extracted database

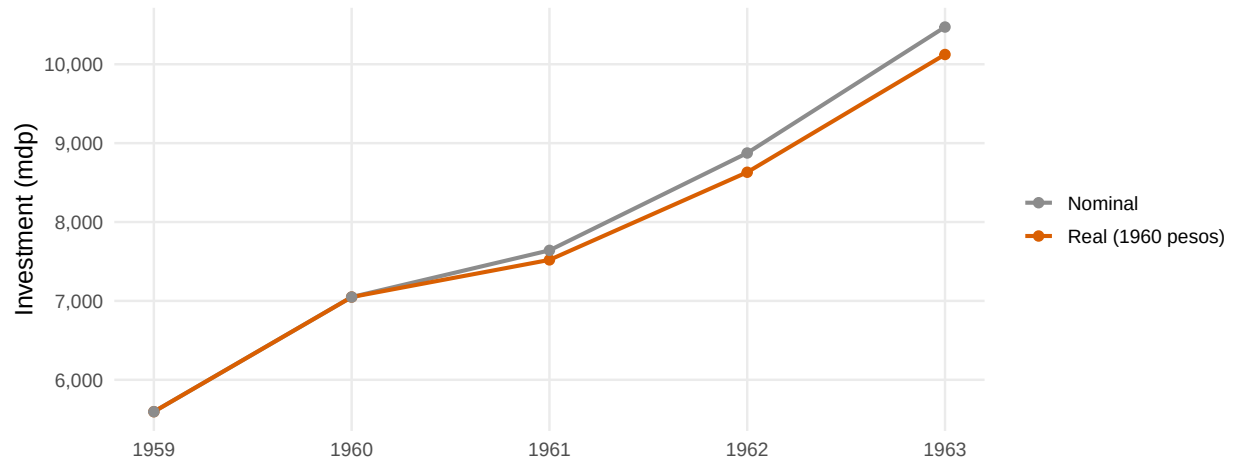

Metric	Value
Years	1959 – 1963
Institutions (distinct)	86
States	32
Sectors	4
Institution $\times$ state records	2,219
Total investment (real mdp, 1960)	38,919

1 Total federal investment by year

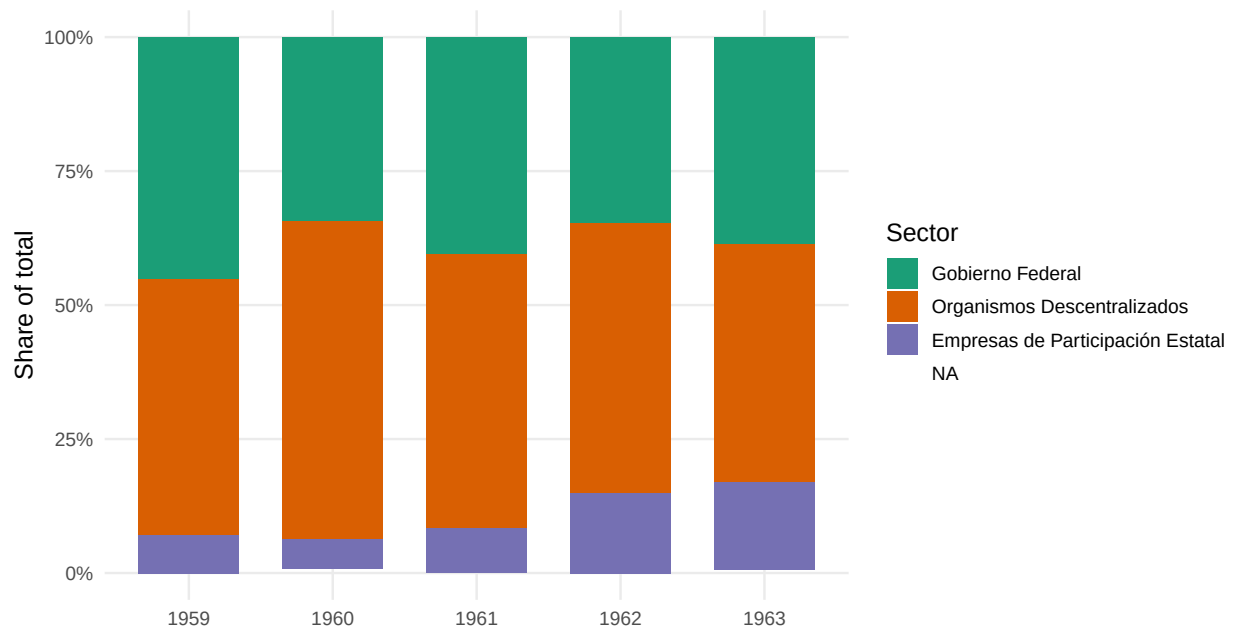

Nominal vs. real federal investment

The gap widens as prices drift up over the sexenio

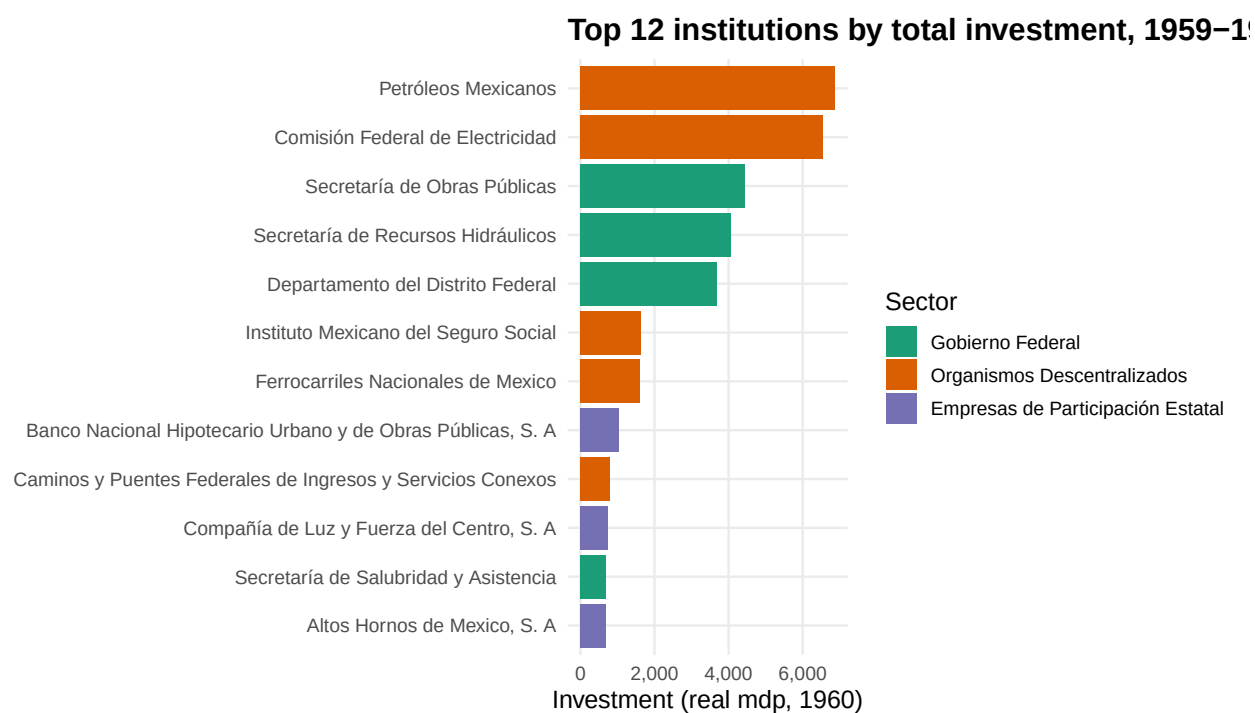

Composition of investment by sector

Share of yearly total across the three public-sector families

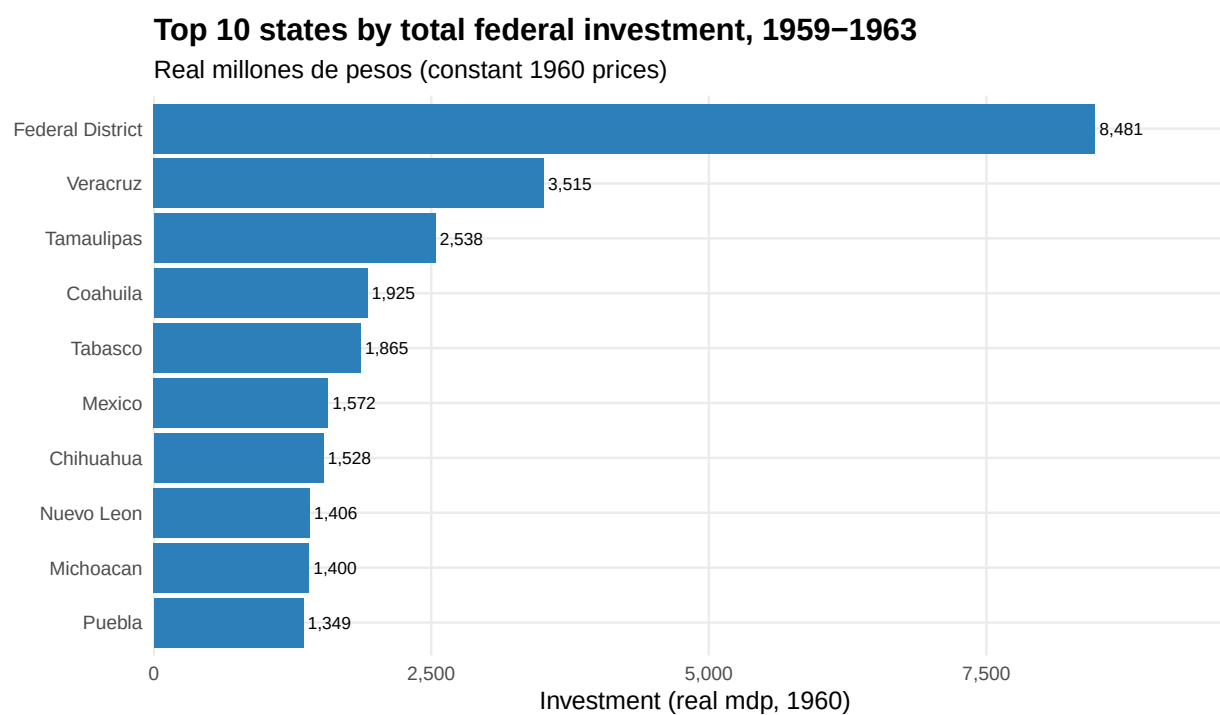

2 Rankings

2.1 Top institutions overall

2.2 Top 10 states overall

2.3 Top 5 states and institutions by presidency

Table 2: Top 5 states and institutions, Adolfo López Mateos sexenio (1959–1963)

Rank	State	State (real mdp)	Institution	Inst. (real mdp)
1	Federal District	8,481	Petróleos Mexicanos	6,870
2	Veracruz	3,515	Comisión Federal de Electricidad	6,557
3	Tamaulipas	2,538	Secretaría de Obras Públicas	4,434
4	Coahuila	1,925	Secretaría de Recursos Hidráulicos	4,068
5	Tabasco	1,865	Departamento del Distrito Federal	3,677

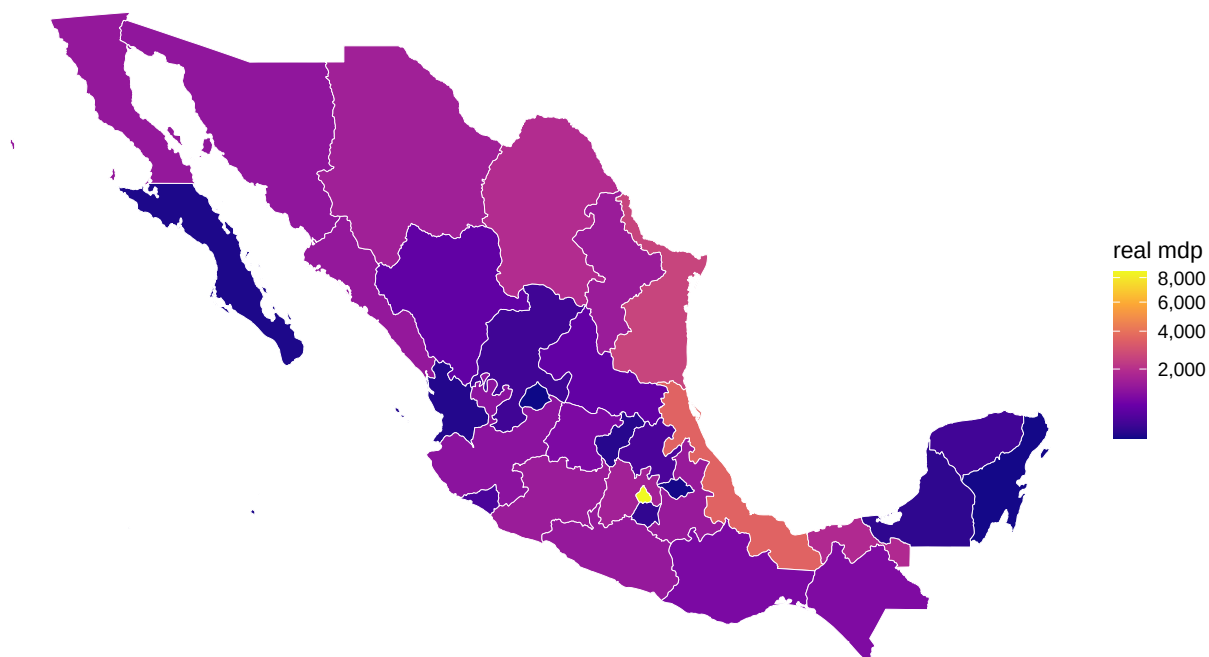

3 State analysis

The volume is organised *por entidades federativas*, so the state dimension is its strongest feature. This section maps where federal money went, how concentrated it was, and how state allocations shifted across the sexenio.

3.1 Choropleth — where the money went

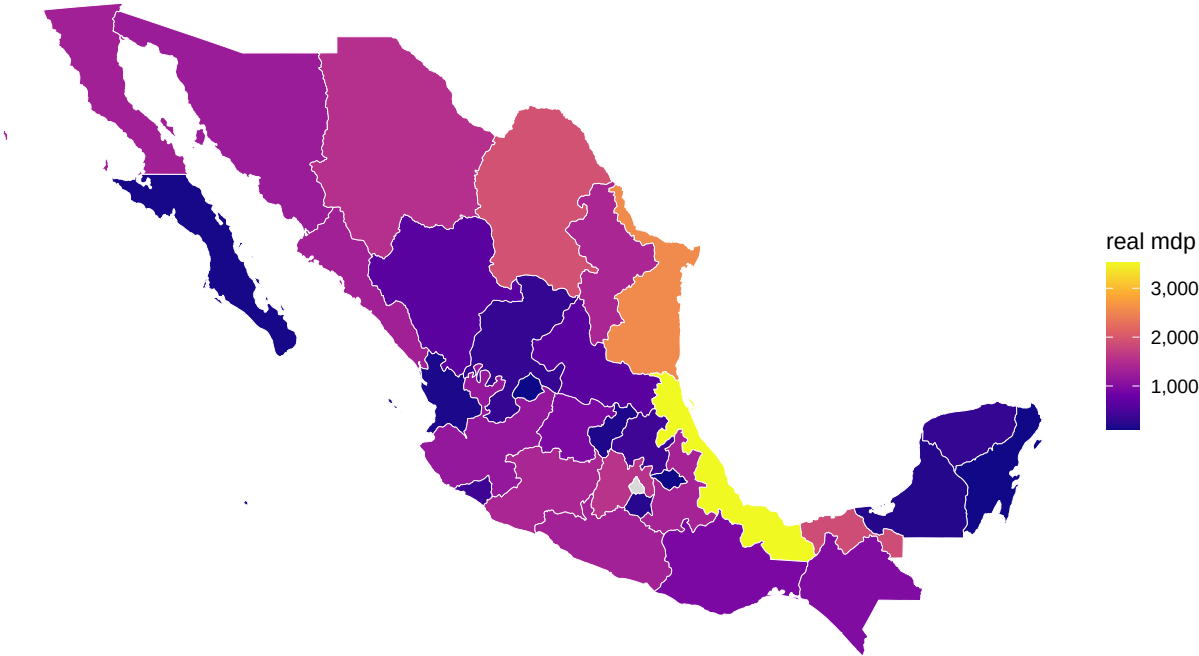

Total federal investment by state, 1959–1963

Millones de pesos (sqrt colour scale). Grey = unmatched.

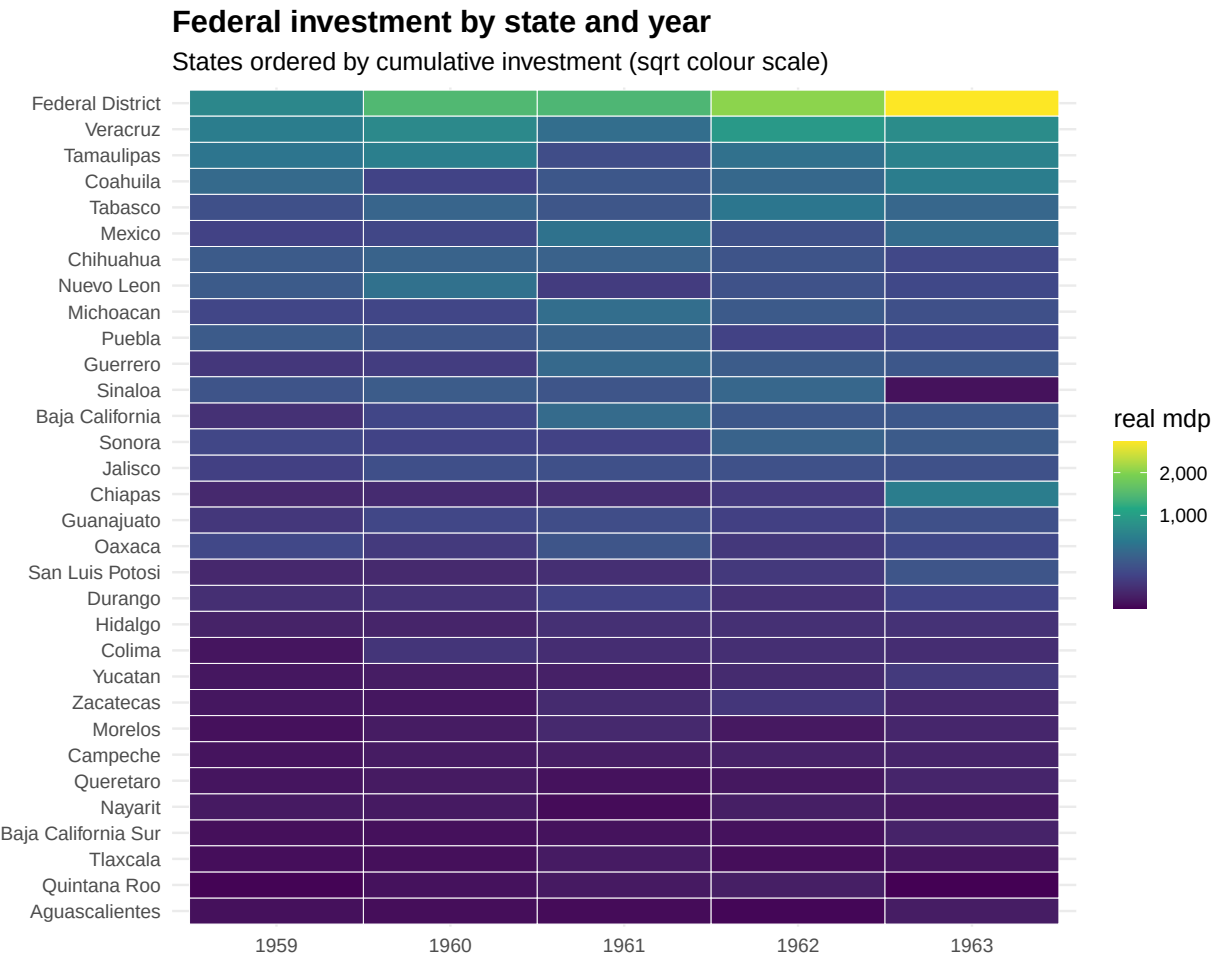

Because the **Federal District** and a few industrial states dominate, the map below drops the Federal District to reveal variation across the rest of the country.

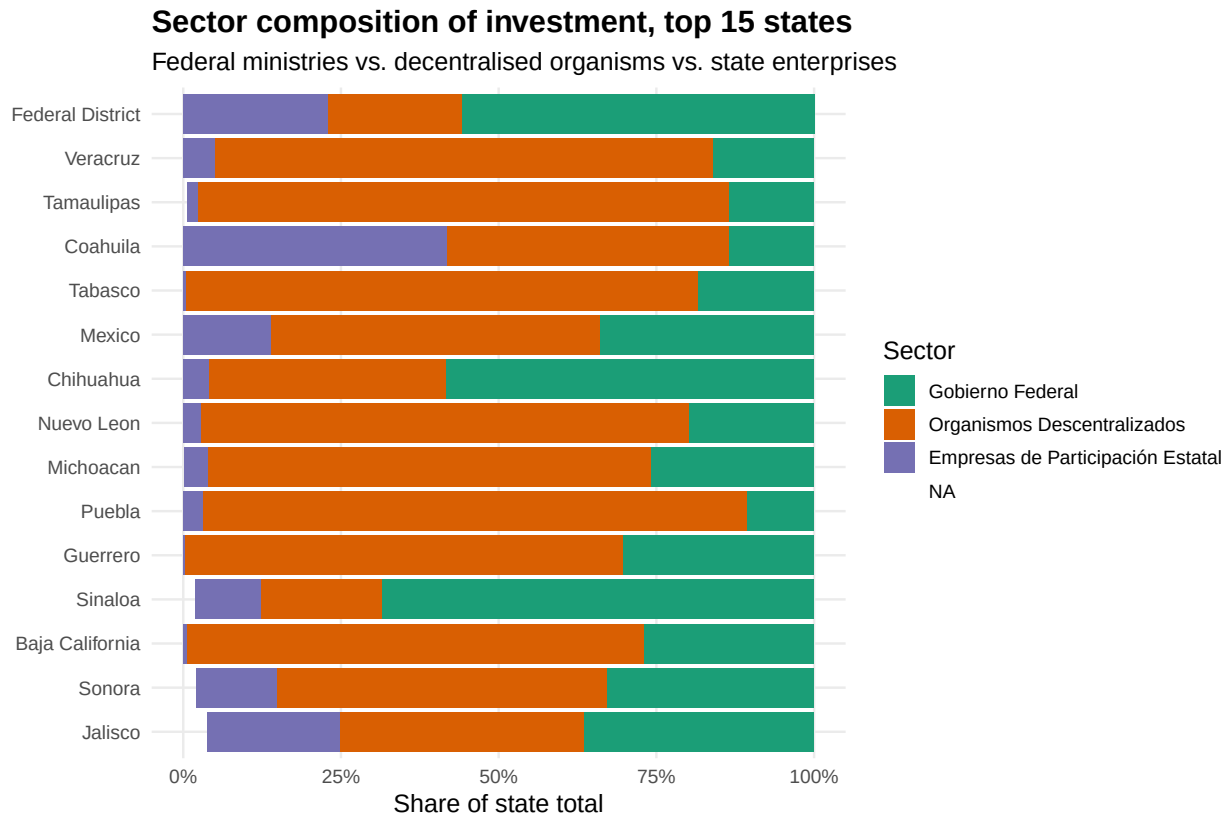

Total federal investment by state (excl. Federal District)

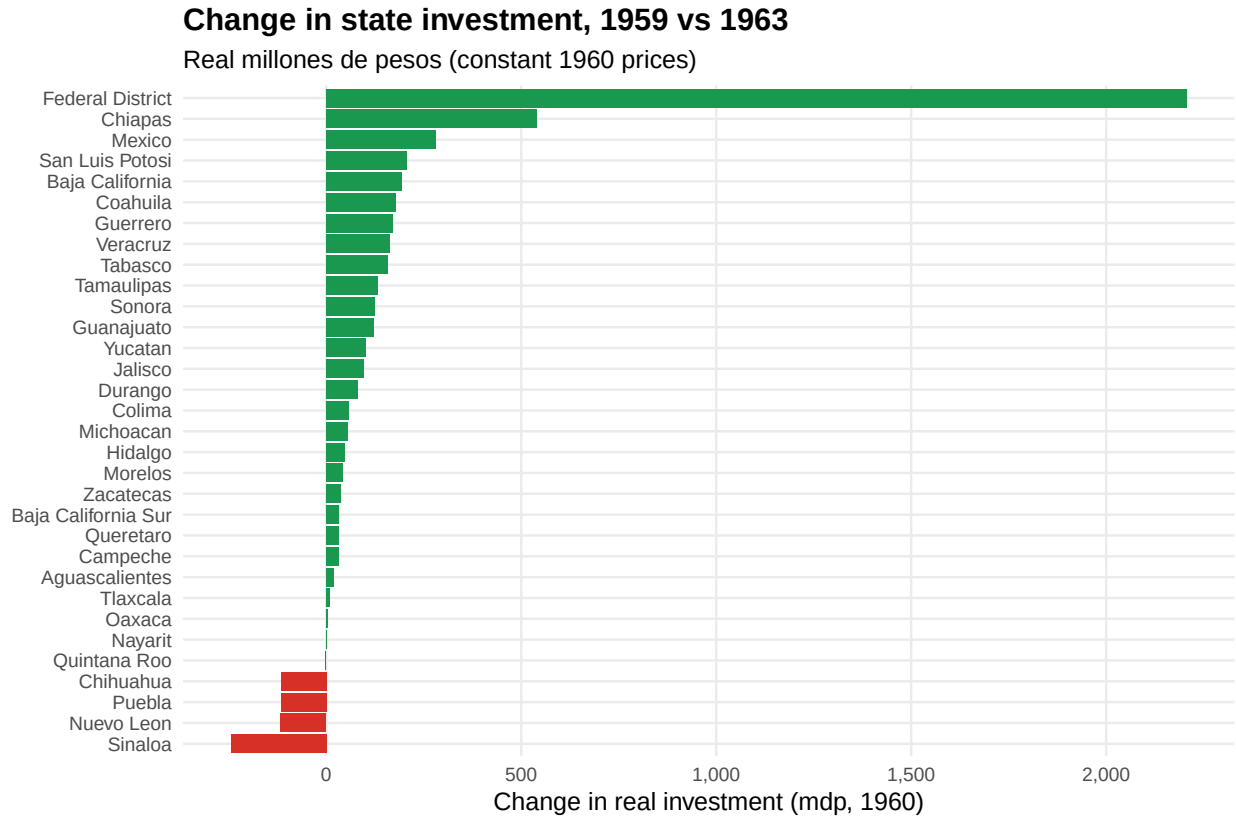

3.2 State × year heatmap

3.3 Sector mix by state

3.4 Growth across the sexenio

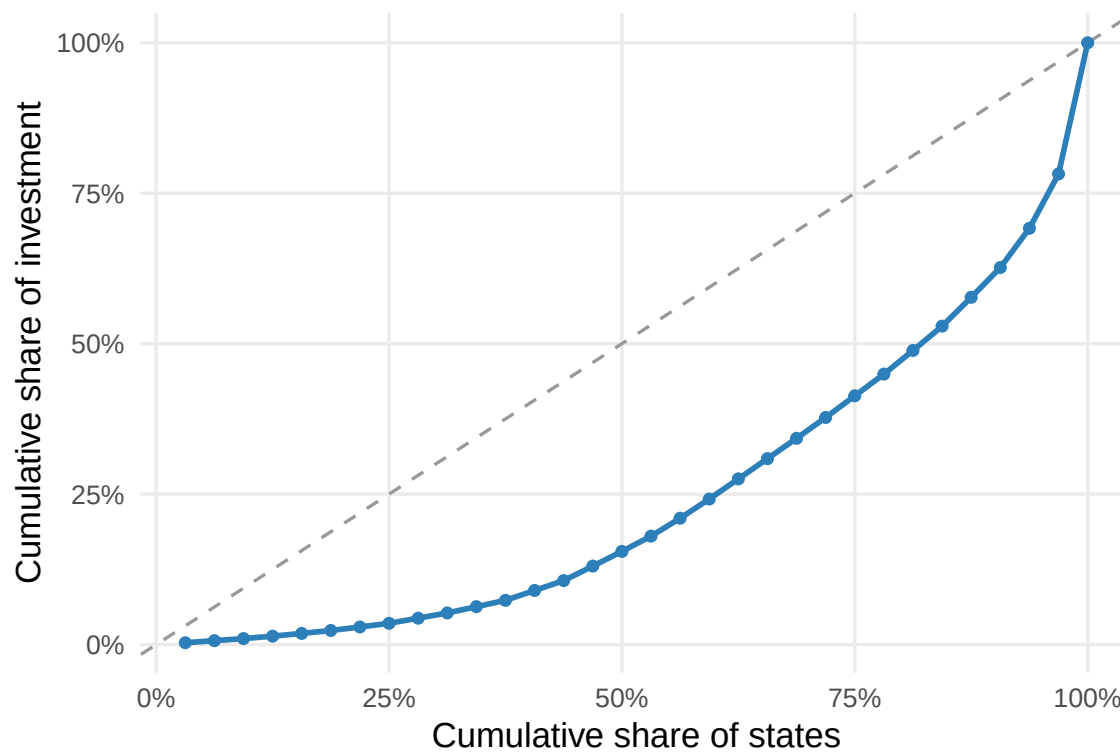

3.5 Concentration & inequality

Table 3: Geographic concentration of federal investment

Sample	Top-1 share	Top-5 share	HHI	Gini
All states	21.8%	47.1%	0.080	0.509
Excl. Federal District	11.5%	37.5%	0.053	0.426

Lorenz curve: investment across states

Distance from the 45° line = geographic inequality

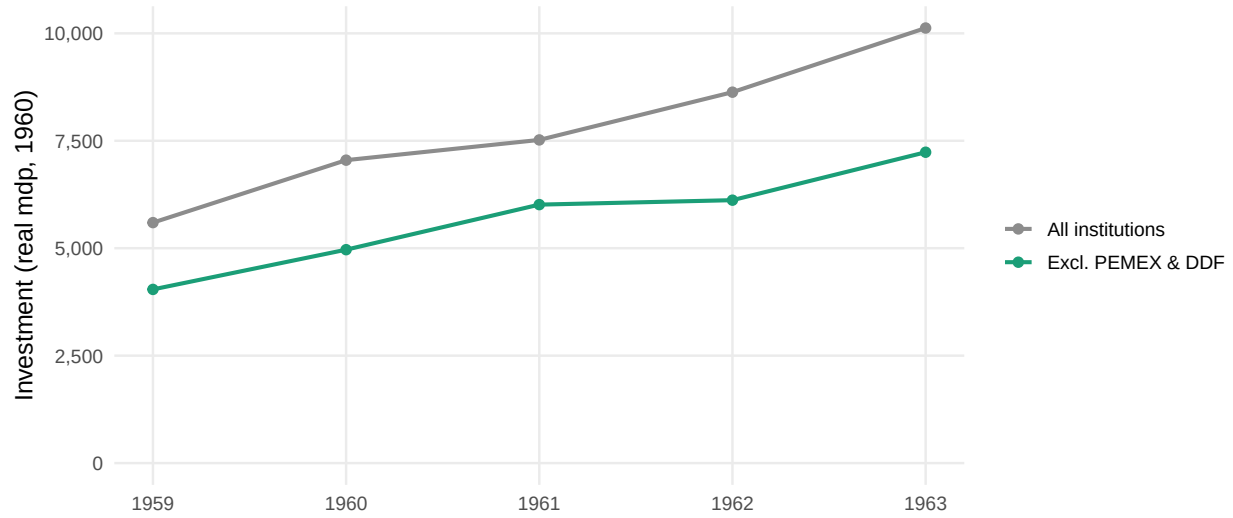

4 Infrastructure view — excluding PEMEX and the Federal District Department

Two line items dominate and distort the geography: **Petróleos Mexicanos** (oil investment, concentrated in a handful of producing states) and the **Departamento del Distrito Federal** (Mexico City's own municipal budget). Together they are **about 27% of all investment**. Removing both isolates cross-state federal *infrastructure* — roads, irrigation, electrification, schools, hospitals, ports.

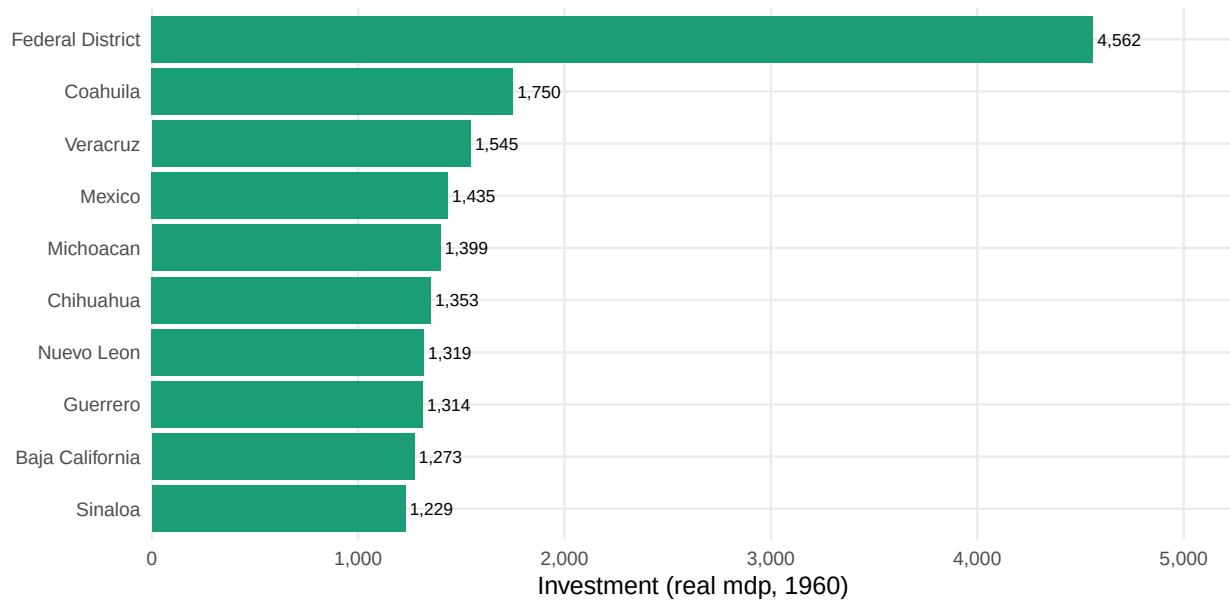

Federal investment: all institutions vs. infrastructure only

Real millones de pesos (1960). PEMEX and the DDF removed.

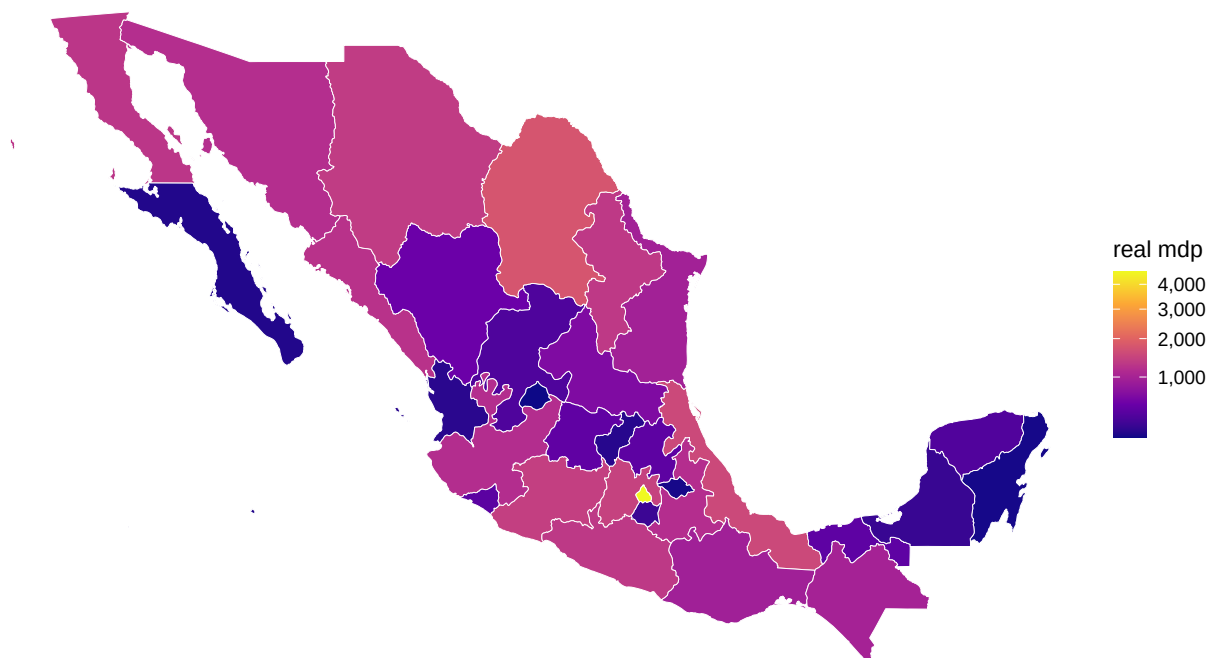

Top 10 states by infrastructure investment (excl. PEMEX & DDF)

Real millones de pesos (constant 1960 prices)

Infrastructure investment by state (excl. PEMEX & DDF)
 Real millones de pesos (sqrt colour scale). Grey = Federal District / unmatched.

The share each state loses when PEMEX and the DDF are removed reveals who the “headline” numbers really flattered:

Table 4: States most reduced by removing PEMEX and the DDF

State	All (real mdp)	Infra only	Removed %
Tabasco	1,865	419	77.5%
Tamaulipas	2,538	958	62.3%
Veracruz	3,515	1,545	56.0%
Guanajuato	952	432	54.7%
Federal District	8,481	4,562	46.2%
Durango	637	504	21.0%
Puebla	1,349	1,169	13.4%
Queretaro	190	167	12.1%

Recommended further analysis

- **Deflator robustness.** Figures are now real (CPI, 1960 = 100). A wholesale or gross-fixed-capital-formation deflator (INEGI/Banxico) is arguably better for *investment* than the CPI and would be a useful sensitivity check; the WPI series here is empty before ~1970, so it can only anchor the later panel.
- **Per-capita and per-area allocation.** Join 1960-census state population to see whether high totals (Federal District, Coahuila) survive normalisation, or whether poorer states received more *per head* — the real distributive question.

- **Extend the panel to 1925–1963.** The full volume covers earlier cuadros; adding them turns the president lookup into a genuine cross-sexenio comparison (Cárdenas, Ávila Camacho, Alemán, Ruiz Cortines, López Mateos).
- **Volatility of allocations.** Coefficient of variation of each state’s yearly share flags politically “swing” vs. stable recipients.
- **Link to the biography networks (project payoff).** Cross the leading institutions here (SOP, SRH, PEMEX, CFE) with the `govt_positions` careers: did tapados and their network alters cluster in the highest-investment ministries? Use `total_mdp` from `federal_investment_institutions.csv` as a **budget-based institution-importance weight** for the manual rank tables in `data/rank/`.
- **Regional politics.** Aggregate to regions (North, Bajío, Centre, South-East) and test whether investment tracked governors’ alignment with the president.
